

We are focused on building an OSS compliance toolchain ecosystem with OSS tools as an OSS project. To accomplish this, we:

- Use existing tools, which all remain independent
- Provide the concepts and glue code to hook them easily together or to be integrated easily in any existing environment
- Provide reference workflows, that can be easily adapted to serve own needs
- Provide the tools hooked together as a turnkey reference toolchain that can be used without fees by anybody

* The tools named in this picture are just examples

Join us in creating a new era of OSS compliance
